Research Interests

I am interested in Applied Cryptography and specifically in the design and analysis of efficient secure protocols. I most recently worked on a more efficient *private information retrieval* construction and on *content moderation in end to end encrypted messengers*.

Education

2022 **Ph.D., Boston University**, Computer Science.
Applied Cryptography.

2018 **Masters, Boston University**, Computer Science.
Applied Cryptography.

2016 **Bachelors in Engineering,American University of Beirut**, Computer and Communication Engineering, with a Minor in Mathematics.

Completed Projects

BatPIR I worked on designing and building a novel efficient private information retrieval protocol with differentially private leakage for cases with high query rates with respect to the database size.

Completed Projects (continued)

Carousel — I worked on designing and building a language and protocol agnostic static analyzer for estimating resource usage of MPC programs with examples in JIFF and Obliv-Rust. These resources include, but are not restricted to the number of online/offline rounds of communication, the number of online/offline messages, etc.

Doed — As part of my internship at Galois inc., I worked on a pilot that demonstrated to the department of education how multiparty computation can efficiently and securely perform any statistics needed for evidence base policy making in-between agencies with no recourse to anyone outside the department itself and without any privacy risks..

JIFF — I built a multipurpose MPC framework (JIFF) that allowed both the Boston Women's Workforce Council and the Greater Boston Chamber of Commerce to securely run their periodic analysis on economic inequalities.

Languages

Human Languages	English, Arabic, French.
Programming Languages	Rust, C, C++, Python, MATLAB, Javascript, Java, x86 Assembly, HTML, CSS.

Industry Experience

Fall 2020	**Galois, inc.**, Research Intern
2017-2019	**SAIL**, Software Engineering Fellow.
Summer 2015	**UBILITY**, Software Engineering Intern.

Services

2020-2021	**Usenix**, subreviewer.
Summer 2020	**TCC**, subreviewer.

Teaching

2020	**CS591L1: Embedded Languages and Frameworks**, co-Lecturer, Boston University.
2017	**CS235: Algebraic Algorithms**, Teaching Fellow, Boston University.

Awards

2020	**Teaching Excellency Award**, Boston University.
2017	**Hariri Fellowship**, Boston University.
2016	**Dean's Creative Achievement Award**, American University of Beirut.
	Dean's Honor List for Fall, American University of Beirut.
